

SHAYZ IN-POOL LOUNGER INSTRUCTIONS

Scan the QR code attached to each section for a helpful instructional video.

Verify the “Active Depth” of your sun shelf

You must measure the water depth where the front of the Shayz lounge will be placed on the sun shelf. The pool must be at normal (full) operating depth when measuring. You must also factor in your water depth when your pool is “active” – people in the pool increase the depth and generate waves. The “Active Depth” of the sun shelf is often 1” to 2” greater than the depth when the pool is still. Taking measurements along the side of the sun shelf is often inaccurate.

Optional Risers & Installation

Shayz works in an “active depth” up to 5” without risers. Risers are sold separately or as part of a Shayz Combo Pack. If your “active depth” is between 5” to 17” you must purchase the correct set of risers for your pool.

- **4” risers (Small size):** increase the seat height to 5.75” and works in up to **9” active depth.**
- **8” risers (Medium size):** increase the seat height to 9.75” and works in up to **13” active depth.**
- **12” risers (Large size):** increase the seat height to 13.75” and works in up to **17” active depth.**

Verify you have purchased the optional risers suitable for the active depth of your sun shelf -- If you need to purchase risers or if you purchased the wrong riser height this is the time to contact your dealer. Exchanges for different riser heights will not be accepted once the risers are snapped-in, or placed in your pool, or scratched. Customers will be required to pay any difference in the cost of a set of risers, plus the cost of shipping. Exchanges must be shipped in the original packaging and any exchanges must arrive in “new” condition. Exchanged products determined to be in “used” condition cannot be resold and you will not be issued a monetary credit in this event.

Items needed for Riser installation:

- Moving blanket or Large Towels
- Large flathead screwdriver
- Biodegradable dish soap or any lubricant safe to use in the pool water

Riser Installation

Step 1

Place Shayz Lounger and Risers in a cool temperature space for at least two hours prior to the riser installation. The risers are intended to fit tight and since polyethylene material expands in heat you may find the risers are much more difficult to snap-in to Shayz when the material is hot.

Step 2

Spread a moving blanket or towels on the ground and place Shayz upside down (riser openings facing upwards) on the blanket to prevent scratches.

Step 3

Snap-in the risers. This could take a lot of force to fully snap into place. TIP: Dip the tongue of the riser into the pool to get it wet and then spread a small amount of biodegradable dish soap around the top tongue of the riser to help reduce friction during the snap-in.

Step 4

If the risers are not snapping into place you will follow Step 3 and get the risers pushed in as far as possible. Then flip the Shayz upright (normal use position) on the blanket. Now sit on Shayz, above the risers, and use your body weight to bounce on the product to snap it into place.

Filling and Emptying Shayz with Pool Water

Risers

- Shayz with **no risers** works in an active depth up to **5"**.
- Shayz with **4" (Small) risers** works in an active depth up to **9"**. You won't need to go through the filling steps if using the 4" riser in active water depths of 6" or less.
- Shayz with **8" (Medium) risers** works in an active depth up to **13"**. You won't need to go through the filling steps if using the 8" risers in active water depths of 10" or less.
- Shayz with **12" (Large) risers** works in an active depth up to **17"**. You won't need to go through the filling steps if using the 12" risers in active water depths of 14" or less.

If selecting a riser height where you don't need to go through the filling steps you will simply place the Shayz in your pool and it will slowly sink and rest on the bottom of your sun shelf.

Filling

Step 1

Place Shayz into the sun shelf area and while holding the handle at the top of the backrest you'll push the Shayz off the sun shelf ledge and allow the front of Shayz to begin filling with water. As it fills it will slowly begin sinking and air will be forced out of the core through the bottom air holes under the seat and through the one-way vacuum air valve under the right armrest.

Step 2

As Shayz sinks lower into the pool you'll rotate Shayz so the risers (if added) will be fully under water and the air valve is facing upward. The air valve will now be the highest point where the air is escaping from the product core as the water fills the core. TIP: you can slightly unscrew the vacuum valve to allow air to escape from this port quicker if you want to speed the water filling process. However, you must remember to tighten the valve before proceeding to Step 3.

Step 3

Once the bubbles stop emerging from the vacuum valve you can turn the Shayz upright. Making sure to keep the bottom of the risers and the bottom of the Shayz under water to maintain the internal vacuum that will keep the water in the core. Then pull the Shayz into place on the sun shelf.

Step 4

Optional Pump: Your dealer offers an optional vacuum pump that can be connected to the port on the head of the vacuum valve. This allows you to use a pump to pull air from the core of Shayz and vacuum more water into the product core. This can be helpful for people who don't want to go through Steps 1 to 3. To fill Shayz entirely with the pump takes around 200 pumps, about 2-3 minutes of fast pumping. Note that when filling exclusively using the hand pump there will be a small amount of air that will be trapped at the top of the knee rest area within the product core and this could lead to a slight floatation of the front of Shayz. The pump is best for topping off the internal water level in the product core after you've gone through Steps 1 to 3.

Emptying Shayz and removing from the pool

Step 1

Lift the front of Shayz to break the internal vacuum that is maintaining the water level in the product core. Continue holding the front of Shayz in this position for 30-45 seconds as the water releases through the bottom holes under the seat.

Emptying Shayz and removing from the pool (continued)

Step 2

Switch from holding front of Shayz and now lift the back of Shayz and watch and wait for the water to drain out of the holes behind the front riser snap-in location. At this point a majority of the water is drained from the core and Shayz can be lifted from the pool and placed in its normal seating position on the pool deck. While resting on the pool deck the core will fully drain and air circulates through the core. Expect water to drain onto the pool deck during this process.

OTHER COMMON QUESTIONS

Tenjam offers videos that can be found on the Tenjam website (www.tenjam.com) and on the Tenjam YouTube Channel. (www.youtube.com/@4TENJAM/videos)

What is the best way to clean Shayz?

Check out this video to learn more about cleaning your Shayz In-Pool Lounger.

What Riser Height is easier to enter & exit the seat?

Check out this video to learn more about the taller heights for Shayz Risers.

Shayz is floating, how can this be fixed?

Step 1: On this instruction sheet packet please review videos in Steps 1, 2, & 3. This will determine that the pool measurement is correct, the correct riser height was selected (if required), and that you filled Shayz and sealed the vacuum valve. If these steps don't solve the issue proceed to Step 2.

Step 2: User hack to add weights to the front riser of Shayz.

Surface Temperature and Color Selection

Check out this video to learn more about surface temperatures and selecting the right color for your in-pool furniture.
